Teaching Statement of Prof. Dr. Osman YILDIRIM Counting 30 years of professional life, 20 of which are dedicated to higher education teaching.

I strongly believe that teaching is a life-time interactive activity. One can teach as long as he is willing to learn from his students, as long as he is capable to successfully induce his research and professional outcomes in his curriculum. The power of the sectoral examples and case studies is the key in business management teaching, along with the academic tutor's ability and flexibility to propose new modules directly linked to the industry requirements.

The subjects that I have taught are concentrated on the Business Management, specifically Human Resources Management. Organizational Behaviours, Leaderships, Strategic Management, Wages, Introduction of Business Management, Introduction of Human Resources management, Talent Management, Occupational Health and Job Safety, Research Methods and similar subjects, were the main subject matters that I was lecturing both in undergraduate and postgraduate levels.

The subjects that I have taught are concentrated on the Electronic-Electrical Engineering. Calculus, Engineering Math, Renewable Energy, Electromechanical Energy Conversion, Field Theory, Electromagnetic Waves, Electronic Circuits, Electrical Circuits, were the main subject matters that I was lecturing both in undergraduate and postgraduate levels.

My essential care was and is the learning outcome of the teaching process. My approach has always been student-centric, aiming to be able to design, having in dept analyse the sub dimensions and optimise their design in all aspects. For this reason, I enrich teaching based on the power of the examples and real-life study cases. Analysing such projects, it comes in direct assistance in solving real problems, linking academic teaching with research results and business management outcomes form the industry.
